

Flexxomat PT

Function: Automatically fillable disinfection mat for passenger traffic

The Flexxomat P disinfection mat is the preventive hygiene solution for passenger traffic in the food industry, greenhouse horticulture, agriculture and laboratories. Within the framework of quality management systems, such as HACCP, IFS, BRC, GSPP ISO 22000, etc., risk and high care areas of production companies can be better protected against the introduction of micro-organisms and their possible consequences. The Flexxomat P can be equipped with an internal fluid distribution tunnel for an effective and disinfectant efficient use, but also for good cleaning. The mat can then be connected to a dosing pump via an external hose grommet (for disinfection supply or for cleaning by flushing with water). Keeping the disinfection liquid in the mat up to the required level is thus relieved of any worries and always guaranteed.

Flexxolutions has more than 15 years of experience in the development and production of disinfection mats and, in addition to standard sizes, also offers customer-specific custom solutions.

Technical specifications Flexxomat PT

| Version | Flexxomat PT L90*W90 | Flexxomat PT L90*W180 | Flexxomat PT L180*W180 |
|---------------------------------|---|--------------------------|---------------------------|
| Thickness (±) | 4 cm | 4 cm | 4 cm |
| Length | 90 cm | 90 cm | 180 cm |
| Width | 90 cm | 180 cm | 180 cm |
| Weight (±) | 2,5 kg | 5,0 kg | 10 kg |
| Fluid capacity (±) | Up to 25 L | Up to 50 L | Up to 110 L |
| Packaging /dimension (±) | Box 91*91*6 cm | Cover 92*92*10 cm | Cover 92*185*10 cm |
| Bottom-/side material | Liquid-tight and fitted with anti-slip profile | | |
| Top side | Permeable, wear-resistant, UV-resistant and vapour controllable | | |
| Core | Stable, liquid absorbing core material | | |
