

Flexxotrolley

Function: Mobile disinfection unit to support automatic filling of the Flexxomat disinfection mat

The Flexxotrolley is a mobile disinfection unit that can be used in combination with the Flexxomat disinfection mat for passenger and internal transport. The mobile unit carrier is made of high quality aluminium. A 60 L dosing container and a dosing pump are attached to this carrier for automatic filling of the Flexxomat.

The Flexxotrolley is very easy to use: plug & play! On the standing place only a power connection (in combination with the Flexxo pump) or only a water connection is needed (in combination with Flexxoturi). The trolley can be used flexibly. It is ideal for food companies, knowledge institutes and seed breeders with small cultivation areas, open days and for situations with mechanics in production areas and greenhouses.

Optionally, a holder for a hand disinfection bottle dispenser is available, which can also be easily placed on the stainless steel hanging board. The holder is adjustable in size for various sizes of bottle dispensers.

Technical specifications Flexxotrolley

Version	Flexxotrolley incl. Flexxoturi	Flexxotrolley incl. Flexxopomp	Flexxotrolley incl. Flexxopomp C
