

# Grafting Clips

To ensure strong plant growth by using the proper grafting clips!

- A complete assortment of grafting clips
- Available in different colors
- Available in different sizes

Royal Brinkman has developed a complete line of grafting clips for all horticultural crops:

- Tomato
- Melon
- Watermelon
- Cucumber
- Bell pepper
- Eggplant

The growth conditions of the plants are highly dependent on light conditions and temperature. In Western European countries with winter planting, the seedlings are generally softer and longer than those raised in southern countries (Mediterranean).

So look carefully at the growing conditions of the plant when choosing a grafting clip. The grafting clips can be made on request in different colors (up to 8 colors). This makes it easier to distinguish different varieties, batches or clip sizes.

## **Clips for grafting cucumber, melon and watermelon:**

PS3: for approximation graft, available in 3 sizes  
PS7: for splice graft (Japanese grafting method),  
available in 2 sizes.

## **Clips for grafting tomato, pepper or eggplant:**

PT2: standard clip with round hole for warmer climate  
PT3: softer than standard clip with oval shaped hole  
PT7: soft and flexible clip for universal climate use  
PT8: soft and flexible clip with stick slot and very smooth grip  
PT9: soft and flexible clip for universal climate use with ribbed  
grips for a better grip
